

Deerfield Community Power

Deerfield Community Power is a program offered by the Town of Deerfield to provide residents and businesses with more electricity supply options. This is done by pooling the electricity use of thousands of users in town for competitive bidding. The program is a Deerfield-vetted alternative to Eversource's default supply and other third-party electricity suppliers. Our program will operate between DATE to DATE. Residents have the option of opting in or out of the program and the option of selecting a rate plan that serves them best. The program's default option adds__% of renewable electricity beyond what's required by State standards. Anyone who receives an electricity bill from Eversource is eligible to participate in the town's program: it doesn't matter whether you are a renter or an owner, a non-profit, a resident or a business.

Community Power rates applicable DATE through DATE

Renewable Electricity

For all of the **additional** renewable electricity - above and beyond State standards - the sources are located in New England and certified as Class I primarily from wind, solar and low-impact hydro. The program purchases and retires Renewable Energy Certificates to substantiate all claims of renewable energy use.

Sign up for cleaner energy!

To do more to combat climate change and reduce your fossil fuel consumption, sign up for the program's extra **50% or 100% options**. It takes less than five minutes!
